

Experiment 2

Student Name: Ishaan Jhamb

UID: 23BCS11668

Branch: CSE

Section/Group: KRG 3-B

Semester: 6th

Date of Performance: 20/01/2026

Subject Name: Full Stack Development – II

Subject Code: 23CSH-309

1. Aim: To implement Single Page Application (SPA) routing in the EcoTrack application using React Router, secure application routes using protected routing with Context API-based authentication, and manage shared authentication state across components.

2. Objective:

- To configure client-side routing using React Router
- To implement SPA navigation without page reloads
- To protect routes using authentication-based route guards
- To manage shared authentication state using React Context API
- To implement login and logout functionality
- To restrict unauthorized access to protected pages
- To understand redirection logic in protected routing
- To analyze the role of Context API in state management

3. Implementation / Code:

Tools & Technologies Used:

- AWS Free Tier Account
- Web Browser (Google Chrome / Firefox)
- Amazon EC2 Service
- RDP Client (Microsoft Remote Desktop)
- Internet-enabled Laptop/Desktop

Implementation Description:

- The EcoTrack application is enhanced by implementing client-side routing using React Router, enabling seamless navigation between different pages without full page reloads.
- An authentication system is implemented using React Context API, which stores and manages the authentication state (`isAuthenticated`) across the entire application.
- A `ProtectedRoute` component is created to restrict access to sensitive pages such as Dashboard, Logs, and Data. If the user is not authenticated, they are automatically redirected to the Login page.
- Login functionality updates the authentication state using context, while logout functionality resets the authentication state and redirects the user back to the login page.

- This approach ensures secure navigation, centralized state management, and a smooth SPA user experience.

Sample Code Snippet:

```
⚙️ Header.jsx ×
src > components > ⚙️ Header.jsx > ...
1  import { Link } from "react-router-dom";
2  import { useAuth } from "../context/AuthContext";
3
4  const Header = () => {
5    const { isAuthenticated, logout } = useAuth();
6
7    return (
8      <header style={{ background: "#6BCF8E", padding: "15px" }}>
9        <h2>EcoTrack</h2>
10       <nav style={{ display: "flex", gap: "15px" }}>
11         <Link to="/">Dashboard</Link>
12
13         {isAuthenticated && (
14           <>
15             <Link to="/logs">Logs</Link>
16             <Link to="/data">Data</Link>
17           </>
18         )} {!isAuthenticated && <Link to="/login">Login</Link>}
19         {isAuthenticated && <button onClick={logout}>Logout</button>}
20
21       </nav>
22     </header>
23   );
24
25 };
26
27
28 export default Header;
29
```

```
⚙️ Dashboard.jsx ×
src > pages > ⚙️ Dashboard.jsx > ...
1  const Dashboard = () => {
2    return (
3      <div style={{ padding: "20px" }}>
4        <h2>Dashboard</h2>
5        <p>Welcome to EcoTrack Dashboard</p>
6      </div>
7    );
8  };
9
10 export default Dashboard;
11
```

```
src > context > AuthContext.jsx > ...
1 import { createContext, useContext, useState } from "react";
2
3 const AuthContext = createContext(null);
4
5 export const AuthProvider = ({ children }) => {
6   const [isAuthenticated, setIsAuthenticated] = useState(false);
7
8   const login = () => setIsAuthenticated(true);
9   const logout = () => setIsAuthenticated(false);
10
11   return (
12     <AuthContext.Provider value={{ isAuthenticated, login, logout }}>
13       {children}
14     </AuthContext.Provider>
15   );
16
17
18 export const useAuth = () => useContext(AuthContext);
19
```

Login.jsx

```
src > pages > Login.jsx > ...
1 import { useNavigate } from "react-router-dom";
2 import { useAuth } from "../context/AuthContext";
3
4 const Login = () => {
5   const { login } = useAuth();
6   const navigate = useNavigate();
7
8   const handleLogin = () => {
9     login();
10    navigate("/");
11  };
12
13  return (
14    <div style={{ padding: "20px" }}>
15      <h2>Login</h2>
16      <button onClick={handleLogin}>Login to EcoTrack</button>
17    </div>
18  );
19
20
21 export default Login;
22
```

ProtectedRoute.jsx

```
src > routes > ProtectedRoute.jsx > ...
1 import { Navigate } from "react-router-dom";
2 import { useAuth } from "../context/AuthContext";
3
4 const ProtectedRoute = ({ children }) => {
5   const { isAuthenticated } = useAuth();
6
7   return isAuthenticated ? children : <Navigate to="/login" replace />;
8 }
9
10 export default ProtectedRoute;
11
```

4. Output:

- The EcoTrack application successfully implements SPA routing
- Navigation occurs without full page reloads
- Unauthorized users are redirected to the login page
- Authenticated users can access Dashboard, Logs, and Data pages
- System logs and environmental data are displayed dynamically
- Logout functionality securely ends the session
- Proper route protection is verified using ProtectedRoute

4	Waste Generated	6 kg	Medium

5. Learning Outcomes (What I Have Learnt)

After completing this experiment, the student is able to:

- Implement SPA routing using React Router
- Secure application routes using protected routing
- Manage shared authentication state using Context API
- Implement login and logout functionality
- Understand route redirection logic
- Compare Context API with Redux at an introductory level
- Build scalable and secure React applications
